6

Women and Politics

Highlights

- Iowa women made up just 14 percent of those serving on state boards and commissions in 1974. In December 2006, that number reached 49.9 percent.
- After the 2006 election, women comprised 22.7 percent of the Iowa General Assembly, up from 10.7 percent in 1977.
- In 2006, Iowa women made up 33.5 percent of all of the state's elected county officials.
- From 1990 to 2006, the number of women judges has increased in Iowa—from 5.5 percent to 20.3 percent of all judicial positions.
- The percentage of female registered voters who vote has dropped considerably since the 1984 general election when 83 percent of female voters turned out at the polls. In 1996 and 2000, female voter turnout for the general election lagged at 72 percent. Seventy-seven percent of registered female voters participated in the 2004 general election.

—Chapter 6—

Women and Politics

6.1 Introduction

Women's involvement in all aspects of politics is crucial for the elevation of the status of women in Iowa and nationwide. Equal participation of women and men in politics will provide a necessary balance that more accurately reflects the composition of society. Although advances have been made in the number of Iowa women who hold public office or serve on state boards or commissions, they continue to be gravely underrepresented in the majority of the public decision-making bodies in the state.

6.2 State Boards and Commissions

The State of Iowa has made great strides over the past twenty-nine years in attaining equal gender representation on boards and commissions. In 1974, only 14 percent of all people on state boards and commissions were women. Governor appointments steadily increased that percentage until 1987, when Iowa's gender balance law was enacted—the only one of its kind in the nation. As of December, 2006, 49.9 percent of members of Iowa's boards and commissions were female. (SEE FIGURES 6.1 and 6.2)

6.3 State Department Directors

The number of women serving as state department directors has increased between 1989 and 2006. Department directors are Governor-appointed positions. In 1989, six women served as leaders of state agencies. As of October 2006, seven women led state departments: Administrative Services, Cultural Affairs, Education, Iowa Law Enforcement Academy, IPERS, Public Health, and Transportation. (SEE FIGURE 6.3)

Figure 6.3
FEMALE STATE DEPARTMENT DIRECTORS,

6.4 Elective Public Office

Iowa's record of electing women to public office, both at the state and national levels, is poor. It is one of only two states that has failed to send a woman to the U.S. Congress or elect a woman as Governor and it ranks 29th nationwide in the number of women that serve in state legislatures.¹

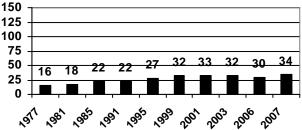

Since 1929 when the first woman was elected to the Iowa General Assembly, the total percentage of women legislators has increased from 0.6 percent to 22.7 percent after the 2006 election.

Even with this increase, women, who comprised 50.8 percent of Iowa's population, represented about one-fifth of the General Assembly. (SEE FIGURE 6.4) Five women served as Senators and 25 women served as Representatives in 2006. Representation of women of color in the General Assembly is also deficient; only four women of color have served in the Iowa General Assembly. Furthermore, few Iowa women have served as elected state officials. (SEE FIGURE 6.5)

Likewise, few women lead Iowa's cities. According to the Iowa League of Cities, 109 women served as mayors out of 947 cities in 2006.

Iowa's record of electing women to county offices surpasses its record of electing women to state and national offices. In 2006, 33.5 percent of all county elected offices in Iowa were held by females. Since 1950, there have been increases in the percentage of women elected as county officials in the state, with the exception of a downturn in 2004 and 2006. (SEE FIGURE 6.6)

6.5 Judges

An increasing number of Iowa women have obtained law degrees over the past two decades, however, there remain few female judges. Until recently, several types of judicial positions were held exclusively by men. That, however, is slowly beginning to change as Iowa is improving its representation of women on judicial seats.

According to the Iowa Judicial Branch, from 1990 to September 2006, women magistrate judges increased from 7 to 34; district associate judges from 5 to 19; district court judges from 4 to 19; and court of appeals from 1 to 3. There were no female senior judges in 1990 or 2006. (SEE FIGURE 6.7)

Women comprised 20.3 percent of the state judiciary positions in 2006, compared to 6 percent in 1990. In 2006 the first woman was chosen to be Chief Justice of the Sumpreme Court.

6.6 Voters

In every presidential election since 1980, the proportion of eligible female adults who voted has exceeded the proportion of eligible male adults who voted. The number of female voters has exceeded the number of male voters in every presidential election since 1964.² The same trends held true for Iowa.

In 2004, women comprised the majority of registered voters in the state at approximately 53 percent, men totaling 47 percent, the same as in 2000, 1996, and 1984. Since women and men make up 50.8 percent and 49.2 percent of the state's population, respectively, Iowa women have a higher voter registration rate than men.

Iowa females also have a higher voter turnout rate than men. In the 2000 and 1996 presidential election, voter turnout was 72 percent for females and 70 percent for males. These numbers improved slightly during the 2004 presidential elections when 77 percent of females and 74 percent of males voted. Nonetheless, this was down from the 1984 presidential election when 82 percent of female

registered voters and 81 percent of male registered voters participated. (SEE FIGURE 6.8) According to a survey by The Women's Vote Project, declining voter turnout for women can be attributed to several barriers, including getting time off work, finding child care, and lack of adequate information about candidates.³ The survey also found that white women were more likely than African-American or Hispanic women to receive information by mail or phone about election issues.⁴

Young adults ages 18 to 24 had the lowest turnout rate for both men and women in 2004, with just 56 and 60 percent, respectively, of those registered to vote casting ballots. This is a substantial drop since 1984 when 63 percent of women and 62 percent of men in that age group voted in the general election. The largest turnout of female registered voters in 2004 was in the 50 to 64 age category at 87 percent. For males, both age groups 50 to 54 and 65 years and older demonstrated the largest male voter turnout at 85 percent. (SEE FIGURE 6.9)

Since 1994, both men and women have been leaving the rolls of registered Democrats and Republicans to register as No Party (Independent). From 1984 to 2004 there was an increase of 81.3 percent of females registered as Independents, while male affiliation increased by 84 percent. In fact, more people are registered as Independent than either Republican or Democrat. (SEE FIGURES 6.10 and 6.11)

6.7 Forward-looking Strategies

- It is crucial that women's active participation and incorporation at all levels of decision making, including that of city and county governments, be promoted by the establishment of measures that would substantially increase the number of women who serve on community decision-making bodies. This could include a legislative mandate for gender-balanced boards and commissions on city and county levels.
- Women's service in state and national legislatures not only establishes a more representative governing body, but also works to advance the status of women in other ways. According to a national survey of women officeholders, women who hold elective office reshape the public policy agenda by giving a priority to women's rights policies and to women's traditional roles as caregivers in the family and society.⁵ Women elective office holders also serve as role models for other women. According to a groundbreaking study by the National Women's Political Caucus in 1994, women who run for elective office win as often as men do.⁶ Indeed, there are few women in Iowa's elective offices because women just do not run. To encourage more women to run for office, work must be done to eliminate discriminatory attitudes and unequal gender power relations in private life that preface inequality in the public sphere.
- Education of judicial nominating commission members regarding the need to increase the number of women in the Iowa judiciary should be continued. Furthermore, the judicial nominating commission members need to be encouraged to give weight and consideration to relevant background and experience in the selection of candidates, rather than favoring the time served in a law office.
- Although the existence of a gender gap in voting has been debated since women won the right to vote in 1920, over the past two decades tangible political differences between women and men have increased. (The gender gap refers to differences between women and men in their political attitudes and voting choices.) For example, in 2004 there was a gender gap of 7 points during the presidential election, with women favoring John Kerry and men preferring George W. Bush. The 2004 gender gap was largest between women and men who were 60 or over (11 points), unmarried (8 points), and college-educated (9 points).
- Voter education at an early age is an important factor in getting people out to the voting booths. Education on the history of women's struggle to obtain the right to vote in the U.S. should be increased in Iowa's schools.
- Political parties and candidates must provide more equitable information by mail or phone to women of varying races and ethnicities.
